PROFESSIONAL SUMMARY

Entry-Level Computer Engineer | BS Computer Engineering Detail-oriented Computer Engineering graduate with a focus on Linux systems administration and network infrastructure. Proven ability to deploy automated solutions and troubleshoot complex hardware/software issues. Experienced in technical documentation and providing high-tier IT support. Committed to optimizing system reliability and streamlining user workflows through proactive problem isolation.

TECHNICAL SKILLS

Operating Systems

- Linux
- Windows

System Administration

- User and permission management
- Package management (APT)
- Python / Bash scripting

Tools & Platforms

- Git & GitHub
- SQL
- Raspberry Pi
- Arduino

Networking

- LAN setup and basic troubleshooting
- IP addressing, subnet basics
- Router/Wi-Fi configuration (SSID, MAC filtering)

Software

- Visual Studio Code
- Google Workspace
- Microsoft 365
- Samba
- PuTTY
- RealVNC Viewer

Other Skills

- Hardware and peripheral troubleshooting
- Technical documentation
- End-user support

RELEVANT PROJECTS

Garbage Collecting & Segregating Robot

- Developed a garbage-collecting and segregating robot with **Raspberry Pi** as the microcomputer and **Python** as the programming language.
- Integrated a **YOLOv5-based object detection** system to identify and categorize waste types in real-time for the automated robotic segregation.

Integrated Ad-Blocking & Recursive DNS (Pi-Hole & Unbound)

- Implemented network-wide **advertisement and tracker filtering via Pi-hole**, reducing bandwidth overhead and improving page load speeds for connected personal devices.
- Designed and deployed a **local Recursive DNS resolver using Unbound** on a Raspberry Pi, eliminating reliance on third-party upstream providers and enhancing data privacy.

Daily Time Record

- Created an excel worksheet to automatically calculate hours worked
- Utilized a combination of different Excel formulas such as IF, MIN & MAX, FIND, and ISBLANK to perform the calculation for hours worked

File Organizer

- Created a file organizing by combining the scripting capabilities of **Python** and its library for creating application UIs which is **PyQt6**.
- It has two modes: the general file organizer used for general purpose organizing and name-based organizer used for organizing personal documents of an individual.

WORK EXPERIENCE

Computer Engineering Intern at University of Santo Tomas-Legazpi

- Provided technical support and troubleshooting for organization-wide hardware and software.
- Resolved network and device issues, including printer maintenance, preventive care, and system configurations.
- Documented technical procedures and recurring issues to streamline team knowledge sharing.

EDUCATION

Bachelor of Science in Computer Engineering

University of Santo Tomas-Legazpi

Graduated: June 13, 2025

CERTIFICATIONS

- **Introduction to Python** – SoloLearn
- **Responsive Web Design** – FreeCodeCamp
- **Setting Up Computer Networks** – TESDA
